

Woodfuel Self Supply

- Grow your own and use your own woodfuel
- Maximise the benefits of the Renewable Heat Incentive
- Find out the right crop for your land
- Find out the right boiler solution for you and your premises

The Bothy, Park Farm, Wellington, Somerset. 10th May 2011
Cookworthy Forest Centre, Beaworthy, Devon. 18th May 2011
The Kingcombe Centre, Dorchester, Dorset. 26th May 2011
9am – 5pm

This course is aimed at farmers, landowners and smallholders who want to grow and use their own woodfuel in order to get the maximum benefit from the Government's Renewable Heat Incentive. The course will look at how to estimate the amount of woodfuel you will need for your premises from a variety of biomass resources (e.g. existing woodland, straw, energy crops and short rotation forestry). The course will also provide insight into the best types and makes of boilers for the different fuels covered. You'll get all the information you need to DIY.

Training will be delivered by Kevin Lindegaard of Crops for Energy. For more information: www.crops4energy.co.uk.

Costs

£38 if eligible, £76 if not eligible*. **Refreshments and lunch will be provided.**

The course has been organised by The Silvanus Trust, working in association with Crops for Energy, Duchy College and the Skills scheme.

For further information and to make a booking please contact Victoria Hughes at The Silvanus Trust on Tel: 01752 846400 or Email: victoria.hughes@silvanus.org.uk. Please book as early as possible to avoid cancellation due to low booking numbers.

** All are welcome, however, attendees will need to be working in or dependent on agriculture or forestry and live/work in the south west in order to receive benefit of RDPE support.*

This event is funded by the RDPE Skills Programme, which is a SW RDA initiative, funded through the Rural Development Programme for England (RDPE).
